Welcome to PageTurn

PageTurn is a reader for PDF books that feels like paper.

This short book shows the main things you can do. Turn the page to begin.

Turning pages

Press the Right or Left arrow keys, or click near the edge of a page.

You can also drag a page corner and let go, just like a real book.

Ctrl+G jumps to a page number, and Ctrl+F searches the text.

Highlighting

Select some words and press H to highlight them, or right-click for more options.

Choose a colour or an underline from the toolbar at the top of the window.

Press N to add a note to the passage you selected.

Writing with a pen

Press P to draw on the page with a pen or highlighter marker.

Press E for the eraser. Ctrl+Z undoes a stroke, Ctrl+Y brings it back.

A stylus works too, with pressure, and the mouse can be enabled in Settings.

Getting help

Stuck on a passage? Select it and press Ctrl+E.

Explain gives a clear answer from the AI service of your choice (add your own key in Settings).

Web searches the passage without leaving the book.

Your notebook

Press Ctrl+B to see every highlight, note and bookmark in this book.

Search them, filter by colour, jump to any page, or export everything as Markdown.

Happy reading!
